

RoomReady Set

Our wall-mounted rack that neatly houses the conference room equipment behind the display. Installation is faster and easier, and all AV components are easily accessible for servicing. The end result? Simple, functional, and neat.

Built Smarter

- Extremely durable, single-piece 11-gauge steel construction.
- Adjustable design allows unit to be centered on the wall regardless of where studs are located.
- 49+ Slim mounts to at least 2 studs
- 65+ Slim, 65+ Standard, and 84+ Standard mount to at least 3 studs

Saves Time

- Equipment and cabling are pre-installed into the Set at our staging facility. The Set arrives on-site pre-wired and ready to be hung. A quick connection to data and power is all that's needed.
- Pulling cables to an IT closet or credenza is a thing of the past. All equipment is stored neatly behind the display, immediately accessible.

Reduces Failure

- RoomReady's streamlined system means far fewer components to hook up and troubleshoot. Fewer components means fewer things to potentially have issues.

Costs Less

- The RoomReady Set creates an external wall backing for mounting, eliminating the construction and material costs required to install a backing inside the wall.
- The patented open design allows components to be cooled by the in-room HVAC, eliminating the costs of adding active cooling to the system.

Stores Equipment Neatly

- Standard models accommodate up to 6 Rack Units, including video, codec amp, controller, and more
- Slim models have space for a small form factor amp and GO controller but no rack units

Services Easily

- Articulated mounts allow the largest displays to extend out so technicians can easily access all components.

Keep it simple.

And functional.

And neat.

Hung on the wall

RoomReady Set delivers a simple and consistent solution to the common problem of fitting all those cables and components behind your display.

Built in our staging facility

We created two versions to accommodate any room situation:

The Standard model is for mounting above furniture or in non-egress pathways.

The Slim model can achieve ADA requirements that limit depth of wall attachments to 4" with the use of certain display models. This model can be used in egress pathways and without furniture under the display.

Model	Dimensions	# of Rack Units	Display Size Compatibility	Required Mount(s)	Display Weight Limit
Set 49+ Slim	42.5" x 24.75" x 2"	0	49"-65"	Chief MTTU	100 lbs.
Set 65+ Slim	56.38" x 31.25" x 2.5"	0	65"-86"	Chief TS525TU	125 lbs.
Set 65+ Standard	56.38" x 31.25" x 4.75"	6	65"-80"	Chief LTM1U + FCAV1U	150 lbs.
Set 84+ Standard	70" x 42" x 4.75"	6	80"-98"	Premier AM-300B	300 lbs.
