

RoomReady View: The Eyes of Your Meeting Room

Wouldn't it be great to have an IT expert in every meeting room? Imagine it...seamless meeting experiences all thanks to onsite support teams eagerly anticipating and mitigating technology challenges.

Unfortunately, for most organizations, this isn't a reality. With teams responsible for meeting spaces across various floors, cities and even countries, it's impossible to be everywhere at once. But what if you had a single view into real-time status updates for all your locations, wherever they are?

Sound impossible? We beg to differ.

Introducing View by RoomReady

With View, you get the convenience of being able to effortlessly monitor all your meeting rooms, without ever leaving your office.

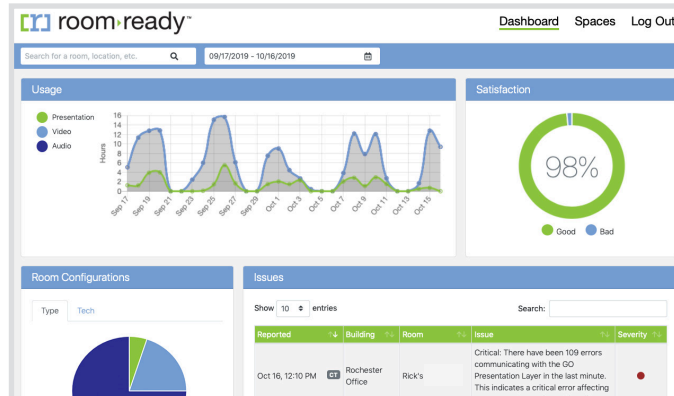

As the industry's most comprehensive meeting room analytics tool, View's intuitive platform easily diagnoses, prioritizes and addresses problems as they arise, ensuring that incidents are resolved before they become larger issues...and often before users even know something is wrong.

And thanks to View's remote capabilities, including diagnostics and incident support, you can expect faster resolutions – without having to wait for an onsite service call – and more productivity. You'll even be able to develop and implement preventative maintenance policies.

How View Works

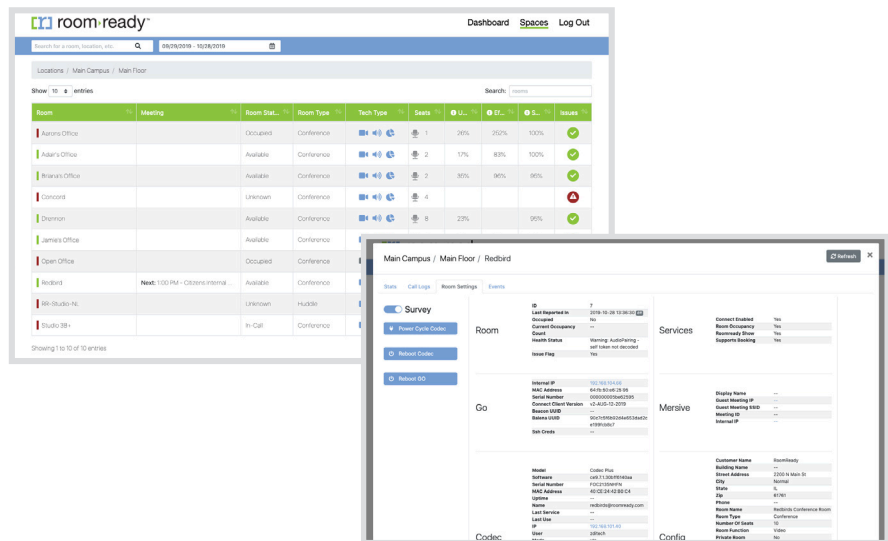

Our comprehensive Dashboard provides a bird's-eye view of all your meeting rooms...

- Rooms in use
- Active users
- Open support issues
- User satisfaction scores

...while Spaces provides a deep dive into an individual building, floor or even a single room.

- Call logs
- Upcoming meetings
- Room settings
- Room task/incident logs
- Room configurations
- Room technologies
- Room location

Whether you have a single meeting space or 100, trust View's innovative data analytics to provide insights your team needs to manage meeting rooms and make better decisions.
